

ISAIAH CARRINGTON

Software Engineer | Full Stack, Cloud & Automation

[LinkedIn](#) | isaiahcarrington46@gmail.com | [GitHub](#)

Summary

Software Engineer with experience building full-stack applications, cloud-native services, developer tooling, and AI-enabled workflows. Currently building digital government services at GovTech Barbados, with prior experience across two Microsoft internships working with Python, Azure, C#/.NET, Rust, and distributed systems.

Skills

- **Programming Languages:** Python, JavaScript, TypeScript, Bash, SQL, Dart
- **Frameworks & Libraries:** FastAPI, Flutter, Laravel, Next.js, Fastify, React, HTMX
- **Tools:** Git, Vim, Shell Scripting, Docker, CI / CD
- **Environments:** Windows, Linux
- **Cloud & Infrastructure:** Azure (Container Apps, Blob Storage, Functions, Logic Apps), Google Cloud, Docker
- **ML / AI / Agents / Automation:** Gemini CLI, Claude Code, n8n, Power Automate

Work Experience

GovTech Barbados	Bridgetown, Barbados
<i>Full Stack Software Engineer</i>	Jan. 2026 - Current
• Designed & built a modular component system for digitizing government forms and services, enabling reusable logic, faster development, consistent implementations, and improved maintainability. • Implemented a no-code form builder that allows non-technical staff to rapidly publish and modify our government forms with ease, removing engineers as a bottleneck. This form builder also comes equipped with a guarded AI system that reduces prototyping time by ~15× on average. • Contributed to & developed several GitHub workflows, and agentic based tooling, rules and methodologies used across the team allowing us to ship faster, and have more certainty in our output. • Designed & contributed to a refined version of the GovTech chatbot, allowing citizens to find information and fill out our government forms from the chat interface.	
Microsoft	Redmond, WA
<i>Advanced Software Engineer Intern</i>	May 2025 – Aug. 2025
• Built a Python-based Video Quality Assessment microservice and containerized it with Docker; deployed to Azure Container Apps and Blob Storage to enable automated quality metrics for internal dev workflows. • Integrated Azure Functions + Azure Queues for asynchronous video processing, reducing manual quality-check steps and enabling horizontal scaling to handle concurrent jobs. • Implemented model-based video quality checks with Netflix's VMAF metric, and instrumented telemetry to track success rate and processing time.	
Microsoft	Redmond, WA
<i>Software Engineer Intern</i>	May 2024 - Aug. 2024
• Designed & shipped a C# .NET SDK that wrapped C2PA Rust bindings enabling internal .NET teams to interact with C2PA features without Rust knowledge, and published the package to internal feed. • Authored interoperability tests and inter-language communications between C#, C and Rust • Automated deployment using Azure Logic Apps and Functions to expose a secure public endpoint for SDK telemetry and diagnostics.	
MCI Technologies	Bridgetown, Barbados
<i>Automation Engineer</i>	Mar. 2024 – Nov. 2024

- **Built** a Python automation service leveraging Pandas to ingest Point of Sales reports from Gmail, normalizes data, performs custom calculations, and exports templated Excel reports.
- **Reduced** manual report creation time from 3 hours (with 4 staff) to ~30 seconds per report per week, eliminating ~12 human quality-check hours per report resulting in a ~1440x process speedup.
- **Improved** data reliability by introducing automated validation and logging; explicitly defining formulas and finding previously missed edge cases.

Pellucid IT

Bridgetown, Barbados

Software Developer

Jan. 2024 – Mar. 2025

- **Developed** RESTful APIs with PHP/Laravel and MySQL, containerized with Docker to provide a dashboard for the Caribbean Protected Areas Gateway.
- **Automated** onboarding, deployment and maintenance tasks with bash and PHP scripts, eliminating repetitive manual commands, and improving developer experience.
- **Built** a cross-platform Flutter app (Dart) using Riverpod, with a Repository pattern designed to provide access to resources and anonymous helplines for students across various universities.

Personal Projects

Bajan Insider (<https://bajaninsider.onrender.com/>)

Python | FastAPI | Tailwind CSS | MongoDB

Built and deployed a news aggregation platform that scrapes multiple Barbados news sources, indexes stories, and generates AI summaries with links to original reporting.

MDStudyRAG

Python | Gemini | ChromaDB

Local AI Retrieval Augmented Generation (RAG) assistant for querying Markdown-based notes, with a CLI interface and retrieval pipeline for grounding Gemini responses, perfect for a studying assistant by feeding it notes.

BodyTrackingAvatar

Python | Pygame | OpenCV | WebSockets

Built a real-time computer-vision system that tracks human pose from a camera feed and streams movement data over WebSockets to independently render an animated avatar.

Leadership

President & Re-Founder of Computer Science Society

UWI Cave Hill

Computer, Mathematics and Physics Department Student Chairperson

UWI Cave Hill

Faculty of Science & Technology Student Vice President

UWI Cave Hill

Education

University of the West Indies, Cave Hill Campus

Bridgetown, Barbados

B.Sc. Double Major in Computer Science

Jan. 2021 – Dec. 2025

First Class Honors

Key Coursework: Web Development, Fundamentals of Artificial Intelligence, Software Engineering, Data Structures, Networks, UNIX, Algorithms, Design for Advanced Web Applications, Database Management Systems, Scalable Enterprise Web Apps, Software Testing and Quality, User Interface Design, Object Oriented Programming Concepts, Operating Systems.
